

## Technical Specifications: Nicaragua SHG Green Coffee

Our coffee is meticulously selected to meet the highest international standards, ensuring a clean, consistent, and superior roasting experience.

### Core Data

- **Origin:** Nicaragua (Highlands)
- **Process:** Washed
- **Grade:** SHG (Strictly High Grown) / EP (European Preparation)
- **Moisture Content:** 10% – 12% (Ideal range for stability and shelf life)
- **Primary Defects:** 0% (Strictly sorted for zero primary defects)
- **Secondary Defects:** Max 8%
- 

### Why Choose Our Nicaragua SHG?

- **Precision Sorting (0% Primary Defects):** By guaranteeing zero primary defects, we offer you a product with significantly lower weight loss (shrinkage) during roasting. This precision ensures a clean cup profile and protects your roasting equipment.
- **SHG Density & Complexity:** Cultivated at high altitudes, our beans develop higher density. For the roaster, this translates into a more heat-resistant grain that allows for complex profile development and intense aromatic clarity.
- **Uniformity & Consistency:** Our European Preparation (EP) and controlled moisture levels ensure that the beans react uniformly to heat, providing a predictable and repeatable roast curve every time.
